

May 20, 2021

Dear Sir or Madam,

Over the next 3-4 weeks, Baldwin and Sons, Inc. will be removing the naturally occurring organic material that is causing the odor. Since the excavation and hauling may result in an increase in the odor, Tetra Tech, an environmental firm, has been retained to monitor the air during the excavation and hauling period to ensure any concentrations of the odor are within the acceptable OSHA worker safety levels. The City has retained Leighton Group, an environmental firm, to be onsite to provide 3rd party review of the environmental monitoring.

Should you have any questions or require any additional information, please feel free to contact me directly. My email address is rpatterson@baldwinsons.com and my Cell No. is (949) 421-7398.

Thank You,

Robert Patterson, CPESC
Director of Environmental and Safety Compliance
