

June 21, 2021 update on soil removal operations at Portola Hills development site:

- Excavation of the odorous material resumed this morning and that material was hauled off throughout the day.
- A new excavation technique was implemented to allow for more water to be applied to the material in order to eliminate what looks like smoke (this is not smoke but a finer grain material mixing with the hotter air coming off the soil) rising from the excavation site.
- The soil removal area will be sprayed with water mixed with simple green and recovered with the plastic barrier at the end of the day.
